

# CHINESE JOURNAL OF CHEMICAL PHYSICS

---

VOLUME 20, NUMBER 1, February 27, 2007

## EDITORIAL

---

Happy New Year!

Happy New Year again! This year is very special for CJCP since it is the 20th anniversary. We have seen a tremendous development in the field of chemical physics in China in the last 20 years. CJCP has always been there in this important period of development in Chinese science, and CJCP has made significant and important contributions to the development of the chemical physics research field in China. And we certainly will continue to do so in the future.

In the beginning of last year, we changed the journal into a full English journal in an effort to enhance the journal impact in the international scientific community. In this transition period, CJCP has encountered many difficulties, and we have also made great progresses. We deeply believe that making CJCP a full English journal is an important step to increase its influence in the international research community. We hope this is the moment of a new start for the great tradition of CJCP to serve the Chinese chemical physics and physical chemistry community, and beyond. Now, our new web based editorial and review system is in place, we hope CJCP will serve our community in a more efficient and direct way (Website: <http://cjcp.ustc.edu.cn>). With the support of the chemical physics and physical chemistry community, I am confident that this journal will make more significant contri-

butions to the development of the chemical physics research field.

At this 20th anniversary of CJCP, I want to take this special opportunity to thank many people who have lead this journal through difficulties and triumphs in the most part of the last 20 years, especially the former Editor-in-Chief, Professor Nanquan Lou, and the former senior associate editor, Prof. Shuqin Yu. And I also want to thank the editorial staff members who have made great efforts in producing a high quality scientific journal. At last, I hope everybody who cares about the Chinese chemical physics development will support our effort to make this journal better.

Xue-ming Yang  
Editor-in-Chief
